WP - New Hydraulic Motor Series from White Drive Products

White Drive Products (Hopkinsville, KY) has released its latest new family of low speed high torque hydraulic motors. Designated the WP series, these motors feature flow rates up to 60 LPM [16 GPM], torque to 488 Nm [4,320 lb-in], and pressures up to 160 bar [2,320 PSI] at continuous ratings.

These motors are intended for medium duty mobile and industrial applications requiring high torque in a compact package. Suggested applications include use with agricultural equipment, skid steer attachments, sweepers, conveyors, machine tools, food processing equipment, car wash brushes and more.

The WP features a three zone spool valve design for proven performance across a wide speed and torque range. A high pressure shaft seal is included as a standard feature providing superior seal life and leak free performance. Integral check valves are also included to reduce case pressure and extend seal life.

12 displacements are available ranging from 25 cc [1.5 in³] / revolution to 388 cc [243.7 in³] / revolution. Ten (10) shaft options, three (3) mounting options, and a wide variety of porting options are available to meet the most common SAE and European requirements.
